walert · live demo guide

Team 4 · European AI Challenge 2026 · v1.2 · 1/4 Before the demo

TONIGHT OR BEFORE 12:30 (TEAM)

☐ Key numbers + named actor in template/web/content.js. Until then the policy panel shows 'Key number 1 / source needed' on the projector. Team input only, never invented.

☐ A French, a Dutch and a German speaker check the video and the 'In a flood' card (motion/src/strings.ts, content.residents.js 'card'). Plain words based on the Crisis Centre's advice; after a change: render the video again (motion: npm run render:fr ...) and rebuild.

☐ Rebuild after any change: cd ~/aic-event/template && ./build-apk.sh video, then copy dist/policy-tool-video-debug.apk to dist/walert-v1.2.apk and dist/policy-tool.html to dist/walert-v1.2.html.

T-15 MIN AT THE TABLE

• Laptop and phone charged. Phone on USB (event Wi-Fi blocks phone-to-laptop; plan B: phone hotspot).

```
$ cd ~/aic-event/template && RELAY_CODE=<our code> python3 tools/relay_server.py --reset --seed-demo
```

Terminal 1, leave it open. --reset empties old test messages; --seed-demo fills the DEMO water/power/gas status of Visé, Liège, Esneux, Pepinster and one DEMO message, so the phone is never empty. Only the speaker knows the code.

```
$ ./install-phone.sh video mirror
```

Terminal 2: installs walert v1.2, connects the message server over USB, opens scrcpy (phone on the projector).

```
$ ADB="$(ls -d /mnt/c/Users/*/AppData/Local/Microsoft/WinGet/Packages/Genymobile.scrcpy*/scrcpy-win64-* | head -1)/adb.exe"
```

```
$ "$ADB" shell pm clear org.aic.policytool.video && "$ADB" shell pm grant org.aic.policytool.video android.permission.POST_NOTIFICATIONS && "$ADB" reverse tcp:8765 tcp:8765
```

Wipes the app's memory so the jury sees the first open (language screen); keeps notifications allowed. Do NOT open the app on the phone again until the demo.

• Laptop: Chrome incognito window -> open walert-v1.2.html (copy it from template/dist in Explorer via \\wsl.localhost\Ubuntu to the Desktop first) -> stay on 'Who are you?'.

• In the policy panel, fold open 'Inform residents', type the code and 'Municipality of Visé', and pre-type the message (page 3, step 8). Then fold it closed again.

• Dry run once if there is time, then repeat the pm clear line above.

THE 5 MINUTES

0:00-2:00	Speaker 1, laptop: policy side, the 4-step briefing (page 2).
2:00-4:30	Speaker 2, phone on the projector: first open to shelter, water/power/gas (page 3).
4:15	Speaker 1 sends the verified message from the laptop; it lands on the phone.
4:30-5:00	Close: 'walert. Anticiper, coordonner, protéger.' Then questions (page 4).

walert · live demo guide

Team 4 · European AI Challenge 2026 · v1.2 · 2/4 Speaker 1: laptop

Speaker 1 · laptop · policy side (about 2 min)

1 **Click 'Policy maker'. The 30-second intro opens.**

Say: Every flood decision starts with two questions: where is the risk, and who lives there? ...

2 **'▶ Start the 4-step briefing'. Step 1: July 2021 from satellite.**

Say: One map brings together where it flooded in July 2021 ...

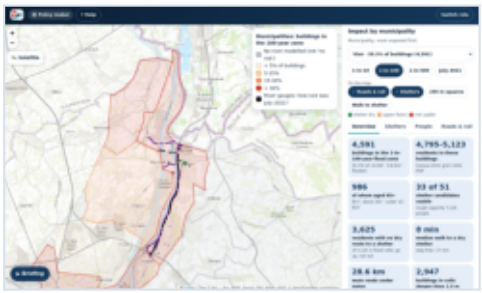

3 **Next (or the clicker / arrow key). Step 3: the gap at Visé.**

Say: ... and the gap between them: places that flooded outside the official zone.

4 **Next. Step 4: the Vesdre gauges. Then 'Done ✓': the card closes, '▶ Briefing' replays it.**

Say: River gauges show how rare July 2021 was ...

5 **Pick 'Visé' in 'Impact by municipality' (or tap it on the map). Overview, then 'Shelters'.**

Say: Per municipality: who lives in the flood zone, which shelters stay dry, who has no dry route: go up, not out.

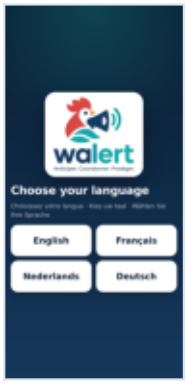

6 **Tab 'Buildings': type the code, 'Unlock': individual buildings on the map. Chips switch the scenario.**

Say: Officials see building detail after the code; residents only ever see 250 m squares.

walert · live demo guide

Team 4 · European AI Challenge 2026 · v1.2 · 3/4 Speaker 2: phone

Speaker 2 · phone on the projector · residents side (about 2.5 min)

1 **Open walert on the phone. First open: choose the language. Tap 'Français'.**

Say: In a flood, every minute counts ... Four languages: French, Dutch, German, English.

2 **The 18-second video in French. Let '112' play, then 'Skip ›' (or let it end).**

Say: What to do, based on the Crisis Centre's advice. No reading, no sound needed.

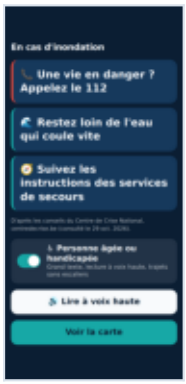

3 **'Qui êtes-vous ?': two choices only, in the language just chosen.**

Say: Residents and policy makers, one app.

4 **Tap 'I live here'. Switch on '♿ Elderly or disabled'. 'Continue ›'.**

Say: One switch: big text, read aloud, and routes without stairs.

5 **The card in French; it is read aloud. 'Voir la carte'.**

Say: The three things that matter, every time the app opens.

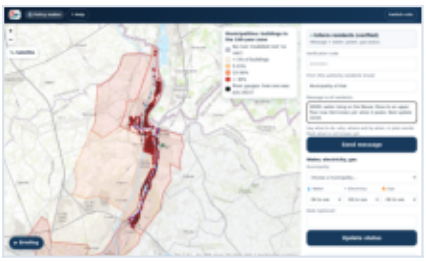

6 **Tap the DEMO location (Visé). Closest candidate shelter, by a dry walking route.**

Say: Where to go: the closest possible shelter ... Not official: we always say check with your municipality.

7 **Scroll: water, electricity, gas for Visé. Tap a number = it calls.**

Say: Nobody should spend those minutes searching three websites.

8 **Speaker 1 on the laptop: 'Inform residents', press 'Send message'.**

Say: With one verified message, signed with their name ...

9 **The phone shows the notification and the message, signed 'Municipality of Visé'.**

Say: ... they reach their residents' phones. walert. Anticiper, coordonner, protéger.

Team 4 · European AI Challenge 2026 · v1.2 · 4/4 If something breaks · questions

IF SOMETHING BREAKS: KEEP TALKING, NEVER WAIT IN SILENCE

Video doesn't play

The app jumps to the card by itself. Say: 'normally an 18-second video plays here' and go on.

Message doesn't arrive

Check terminal 1 is running and the 'Demo server' row in the policy panel. No time: show the inbox and say 'a demo server on our laptop today; for real it runs at the municipality'.

Phone can't reach the laptop

Re-run the adb reverse line. Wi-Fi is blocked anyway: USB or the phone's hotspot.

No GPS / wrong place

Use the DEMO location button (Visé); the app says DEMO wherever it is used.

Read aloud is silent or in English

The phone has no voice for that language. Keep talking, don't wait.

Projector or scrcpy fails

Hand the phone to the jury; the laptop shows the policy side on its own screen.

Language screen doesn't show

The app remembers the first open. Run the pm clear line, or replay it from 'Official advice' (link '▶ What to do in a flood').

LIKELY QUESTIONS

Are these shelters official?

No: candidates from our own analysis (dry walking routes, 1-in-500-year model). Municipalities and BE-Alert name the real reception centres. We never say 'safe'.

Where does the advice come from? Who translated it?

It is based on the National Crisis Centre's flood advice (its FR/NL/DE/EN pages, 29 Oct 2026), in plain words, not word for word. Say 'a teammate checked it' only once that check is done. The rest of the app is English for now.

Where does the data live?

In the app for this demo: the teammate's analysis as municipality totals, 250 m squares and public buildings; building points open only after the code. In a real deployment it all sits on the municipality's server behind the same login as the messages.

Why can't residents see buildings?

Privacy: no flood flag on anyone's home. Residents see 250 m squares, with no count where fewer than 5 buildings.

Is the water/power/gas status real?

No: a DEMO scenario we loaded; in reality the operators and the municipality set it from the policy side.

Utility numbers?

From official pages for all 66 municipalities (29 Oct 2026): electricity and gas from the regulator CWaPE by postcode, water from each distributor's list. Where a town has two water operators, the app says 'check your bill'.

Where does my location go?

Nowhere: it stays on the phone.

What area?

66 municipalities in Wallonia (Copernicus EMSR518); the EU datasets reach much further.
